

Project Management

Managing pharmaceutical and food manufacturing facility projects to ensure regulatory compliance

Sometimes, companies just don't have the resources or knowledge to manage a plant upgrade. This is particularly the case when TGA/FDA or Medsafe compliance is a critical factor.

PharmOut offers project management services to help you get production up and running and comply with the relevant regulations. Our extensive experience in the pharmaceutical and food industries will ensure that things like "develop maintenance life plans for machinery" are on the project plan. Under-estimating the required validation effort is another common project management mistake.

PharmOut can help you at any point in your project. Including:

- Writing the user requirements specification
- Project planning
- Project management
- Validation & commissioning
- Project post mortem studies

PharmOut Pty Ltd Australia

Level 9, 440 Collins Street
Melbourne, 3000, Victoria

Level 40,
100 Miller Street
North Sydney, 2060, NSW

8 Pearson Place
Holder, 2611, ACT
Telephone: +61 3 86 400 933

PharmOut consultants use the Good Automated Manufacturing Practice (GAMP) 'V' model for project management. This model is now widely accepted within the pharmaceutical and food industries as being best practice in project management.

PharmOut does not supply engineering or trade services. Instead, we will manage the project using your onsite services. Alternatively, we can help with selecting vendors for the various components of the project. Our independence ensures that the best vendor is selected for each part of the project.

To talk to us about managing a project, please call PharmOut on the numbers listed below or email info@pharmout.com.au.
